### SIMMS2Go Feature List

#### Work Anywhere

Goodbye desk, and hello freedom. With SIMMS2Go, you have the freedom to connect to your important data remotely and all you need is a web browser and Wi/Fi access to your network.

#### Online Sales

Un-tether yourself from your office and create modern and professional quotes, invoices or sales orders from anyplace. You can generate final (or interim) invoices from active projects, invoice sales orders, receive payment faster, or consign items with a single keystroke.

#### Core Returns / RMA & Inspection

If you sell transmissions, motor rebuilds, deal with medical equipment sales for example this module is a must have.

This unique module allows you to indicate what items you expect a core (old defective item the new item is replacing) for after selling the part, once sold the system automatically sends out email alerts to the customer and user based on pre-defined email templates and trigger days warning the customer that the core is still expected. When the Core is returned, you can indicate if the core requires inspection and run it through an easy to use fix and repair module empowering you to fix the item and put back in stock or destroy it.

#### Customer Management

A single easy-to-understand window lets see your entire customer's history, their balances & credits on file, documents attached to their sales transactions, and of course you can manage and schedule tasks, activities and meetings for your customer as well. Customer management was always supposed to be this easy.

#### Document Management

Attach important images, photos and documents to your sales transactions with speed for future reference and never forget

#### Item Consignment

Use SIMMS2Go to consign items to your customers. Apply sales deadlines and never worry about forgetting what your

<p>a detail of any sale ever again – finally, there’s a sales process with document management built right in.</p>	<p>customers have in consignment or when they next owe you for the items because it’s all being tracked for you. SIMMS2Go also sends automatic invoices to your customers for items that have not been reported sold or haven’t been returned at deadline time.</p>
<p><b>Multi Currency</b></p> <p>Maybe you need to invoice using Euros, or American Currency, or any of the currencies of the world. No matter which one you need, with <b>SIMMS2Go</b>, you can bill it. You can thank us later ;-)</p>	<p><b>Recurring Invoices</b> <i>(Coming soon)</i></p> <p>Say you have a client who pays the same amount every month – create that invoice, set how often it recurs, and ZOOM, out it goes automatically. Simple, huh?</p>
<p><b>Sales Invoicing</b></p> <p>Congratulations on your sale, now let SIMMS2Go take it from here! You can complete your invoice quickly on-the-fly, convert ongoing sales orders, or approved quotes, or move projects into invoices with one keystroke. SIMMS2Go makes customer sales easy and fun. Besides: shouldn’t making money be fun and exciting?</p>	<p><b>Sales Orders</b></p> <p>Wow! Suddenly a mega order occurs that may take some time to complete. No problem – SIMMS2Go lets you just enter the information in the sales order to then invoice against the sales order as you fulfill it in stages. You’re free to focus on making money instead of on paperwork. Feeling the fun yet?</p>
<p><b>Sales Quotes / Estimates</b></p> <p>Creating professional-looking estimates is a breeze with SIMMS2Go. Even easier is to convert an approved estimate to a sales order or invoice – one mouse click is all it takes – TA-DA!</p>	<p><b>Sales Taxes</b></p> <p>Need to add sales taxes to your invoices? No sweat. SIMMS2Go supports multiple sales taxes so just set 'em up and SIMMS2Go will do the work in making the reporting and remitting a snap!.</p>
<p><b>Send Emails or Print</b></p> <p>Maybe your clients prefer that you email your invoices or maybe they like getting their bills the old fashioned way by mail. With <b>SIMMS2Go</b>, you can do both. With one click, you can email and know if and when your customer has viewed your invoice; with another click you can print your client's invoice.</p>	<p><b>Transaction Report Customization</b></p> <p>Add your logo, and select your invoice, quote, or sales order template – then generate professional-looking invoices with ease.</p>

<b>Transaction Dashboard</b>	
<p>Gain a snapshot view of your most recent sales transactions, easy-to-understand sales graphs and charts for the previous year as well as a “hot list” of pending activities so you can never miss an important sales meeting ever again!</p>	
<b>Online Purchases / Expense Management</b>	
<p>Take control of your expenses, generate purchases effortlessly from anywhere, and easily produce purchase orders and process your receipts of goods in mere seconds. The time you save lets you spend more time with family and friends instead of being trapped with a pile of time-consuming paperwork.</p>	
<p><b>Purchase Orders</b></p> <p>Now your company is growing and you wish to track your vendor orders. With SIMMS2Go, this task is quite simple. Just enter the item information you wish to order then save and print or email it directly to your vendor. The system automatically totals the purchase orders and calculates taxes allowing you to save energy, paperwork and time, energy and paperwork while helping you to do your part in saving a forest of trees.</p>	<p><b>Receipt of Goods</b></p> <p>Receiving shipments is painless with SIMMS2Go. Just select the purchase order you’re receiving against and verify the line items. That’s it, you’re done. Receiving goods doesn’t need to be hard, does it?</p>
<p><b>Vendor Management</b></p> <p>From one easy-to-understand screen you can see your entire vendor history, documents attached to their purchase transactions, special vendor notes, balances, and credits on file. You can also manage and schedule tasks and activities for both you and your vendors. Vendor management is supposed to be this easy.</p>	

### Time Tracking & Projects

Time, as they say, is money, and SIMMS2Go will help you keep track of both these valuable commodities. From time tracking of project management to attendance and time – all from anywhere in the world you happen to be.

#### Generate Invoices

Invoice for any of your projects with a click, or choose only those that are ready to go. And then you can get back to work: ah, to be busy...

#### Project Manager

Create projects, assign tasks to staff, track materials used and time, bill in stages...and watch your revenue grow. Then relax...knowing that you will always have your finger on the pulse of your business projects at anytime from anywhere.

#### Project Management Timer

Log your Time & Attendance clock using ins-and-outs to active projects enabling you to never lose a single billable minute. When it's ultimately time to send the bill, you can pull that tracked time immediately into the invoice from the project. So easy. So good. So simple.

#### Team timesheets

Are you working on a project with multiple collaborators? Brilliant! Everyone can track their time with team timesheets, so you'll always know how much time is being used – and how.

#### Time & Attendance

Managing your staff doesn't have to be tough. SIMMS2Go offers simple Clock In and Out with the added ability to track where employees clock in and they can enter additional comments related to each activity, thus minimizing compliance risks by tracking and enforcing complex compliance requirements. Did we mention it's easy to use? Even the most technologically illiterate person can employ this feature.

#### Track Unbilled Time

Suppose you've spent some time on a project and you've yet to bill for it, but you want to see how much your estimated bill will be (when the time comes). From your reports, you can see just how much that will be. (Sometimes stuff like that can be ever-so- motivating, don't you think?)

### Item / Warehouse Management

SIMMS2Go makes easy and smooth the complex process of inventory administration and surpasses every other stock software with its versatility and comprehensive approach to inventory coordination, which at its core is entirely about details.

By selecting SIMMS2Go, stock is already your most priceless asset and you are obviously serious about its accuracy and protection – as well as your goal to convert it

into profit. SIMMS2Go is your perfect companion both now and in the future.

**Apparel Item Matrix (color/size/style)**

You can assign your apparel items a different cost and price for every style, color and size combination. This enables SIMMS2Go the power to reflect the appropriate cost and price for each item with its related style, size and color combination within your purchasing and sales documents.

In today's apparel market, retailers and consumers aim for lower prices, higher quality and quicker delivery. SIMMS2Go, most simply, makes you look good to customers and vendors alike.

**Expiration Date Tracking**

An Expiration Date Tracking system that provides robust and comprehensive lot management, purchasing, and tracking is worth its weight in gold – usually your gold.

The tracking of foods or beverages, consumer packaged goods, chemicals, or pharmaceuticals will, in some ways, become important to many industries. The tracking and online visibility of the shelf lives and associated expiration dates of inventory will enable marketing and sales personnel to proactively move these products before their expiration. With SIMMS2Go there is no more crying over spoiled milk.

**Item Categories**

One of the crucial steps to getting the most out of your stock management software is to properly assign useful and practical categories to each inventory item. Few retailers use categories and subcategories properly, and this is an absolutely essential step to getting the most from your stock management software.

When done correctly, the categorizing of your merchandise will provide you with powerful data that empowers you to manage your business with effectiveness and accuracy.

**Item Disassembly**

This unique module lets you take any inventory item and disassemble it for parts. You can then track which parts have been removed from the initial item, what the costs were and instantly review the new depreciated value of the original item.

For example, let's say you want to sell an electric cooling fan for \$100.00 from a \$12,000 motor that you have sitting on the shelf. You take that fan out and sell it. Meanwhile, the original motor is now worth \$11,900 in your inventory and you can drill down and see what was removed, when it was removed, and what the value of the item was.

**Item Management**

Easy-to-master Item Management software may seem impossible but with SIMMS2Go you have a powerful and seamless stock

**Item transfers**

SIMMS2Go gives you the degree of control to transfer inventory items from one location to another with a smooth-and-easy

<p>management system that is both simple to use, accurate and contains dynamic features like tracking where your specific items are at any given time, lot control, location/warehouse management and serial number management. All of this works in combination with the flexibility of working on a data collector, iPad, tablet, or wireless laptop anywhere around your warehouse, giving you increased efficiency and speed.</p>	<p>transaction interface, moving as many items from as many places (and to as many locations) as you wish at any given time.</p>
<p><b>Location Management</b></p> <p>Establish as many Item Locations as you want at any time, giving you tracking control and management accuracy over the movements of tools, equipment and inventory from location to location – even to such locations as variable as supply vans or a single employee’s car.</p>	<p><b>Lot Number Management</b></p> <p>Lot Tracking of stock items is a vital requirement for many businesses. <b>SIMMS2Go</b> gives you this capability for both stocked parts or parts issued already to customers (which is useful for warranties and recall tracking). Traceability by lot gives you data on where the items were used from the moment of receipt through every single stage of production. You can designate a list of attributes that can be collected and tracked for each lot, allowing you to monitor each lot’s history within the system with complete accuracy.</p>
<p><b>Materials Requisition</b></p> <p>If you have more than one company or department then you know the stress involved in sharing and moving inventory from one to another. <b>SIMMS2Go</b> makes this task simple and seamless, by enabling you to process a Materials Requisition from one company and filling it from another company with a keystroke. You can automatically generate the accounting audit trail required to show the movement of the items from one company to the other. A big shout out to <b>SIMMS2Go</b> as, once again, a complicated process has been made EASY.</p>	<p><b>Physical Counts / Stock Adjustments</b></p> <p>Conduct and fine tune your physical inventory counts with its numerous Stock Count features. The flexibility of working on a data collector, iPad, tablet, or other around your warehouse will help your stock-counters gain efficiency and speed by scanning barcodes on the spot, instead of hand-writing quantity details on a clipboard. <b>SIMMS2Go</b> will compare its quantities with the details from your entry to determine the variance (if any). You can also review all discrepancies before you finalize the Stock Count to decide if a re-count is necessary.</p>

### **Serial Number Management**

The Serial Number Tracking in SIMMS2Go combines a limitless combination of serial numbers from the moment they enter inventory, through the time they are sold from the system – all the while retaining the complete manufacturer’s/distributors’ histories – while creating a permanent record. Warehouse personnel retain access in SIMMS2Go to a comprehensive virtual catalog of historical data.

Serial numbers serve as a flawless identification standard unequalled by any other positive tracking method.

### **Stock View**

At any given time, from anywhere in the world, you can view your current inventory status, what items you have in stock and where you have them. This information gives you the advantage while managing your stock levels or while evaluating your stock availability for that next big sale at your client’s site.

### **Tool & Equipment Crib**

When a tool is checked out from a manned Tool Crib using **SIMMS2Go**, for example, the Tool Crib Manager must scan the badge of the employee that is requesting a tool and then the tools and/or equipment is scanned, with serial numbers (if applicable).

Once the tool is handed out, the employee then becomes accountable for it. The time spent using the tool is monitored through the tracking capabilities of our inventory control software.

Each tool is managed and logged, and if there are missing items or items checked out for an extended period, the tool tracking software reports what is missing, for how long, and who is accountable.

With **SIMMS2Go’s** Tool Crib software you can optimize your business and never loose track of your equipment or tools ever again.

### **Google Calendar integration**

Not only do you have the ability to schedule tasks and events associating them to customers or vendors but you also have the ability to connect your calendar with Google calendar, assuring you never miss a meeting or event.

### **Maintenance Professional – Equipment / Automotive**

SIMMS2Go’s Maintenance Pro feature helps managers, maintenance teams and mechanics assign and schedule tasks. Easily track work performed and experience the freedom of knowing you’re up to industry standards:

- Experience less work disruptions due to emergency repairs on equipment, vehicles and buildings
- Improve progress from teams and technicians on completion of tasks and time spent
- Approve scheduling and delivery of work to ensure uniform labor distribution
- Make progress by recording problems and tracing solutions via logged history
- Have an effect on cost control and savings, by avoiding last minute emergency decisions
- Enable managers to analyze and evaluate expenses in energy usage, labor and maintenance

#### MANAGING MATERIALS

Tracking materials and items, such as spare parts, consumables and stock supplies, needs to be organized and well managed. Tracking inventory becomes easy when automated through SIMMS2Go's Maintenance Pro feature. Companies save money and time with the ability to stock just the right amount of inventory and assign inventory to any location or team.

#### SCHEDULING

Use the Maintenance schedule feature to schedule preventive maintenance in advance. This is particularly important for recurring work and sending reminders to the right people. Scheduled maintenance planning helps teams with distribution of workload and guarantees that tasks are not forgotten.

#### WORK-REQUESTS

Maintenance teams often have to take external work-request from people outside the organization or department. This can be a request from an assembly line operator, or a tenant who is requesting heating system repairs. Maintenance Pro connects various channels of contact into a central place, recording requests and tracking completion.

#### WORK-ORDERS

Manage the complete cycle of maintenance in one software package. From identifying the repairs needed, followed by placing the order, then assigning task to specific teams or technician. Finally marking the work-order as complete, before concluding the cycle by notifying appropriate individuals.

#### RECORD HISTORY

The lifespan of a facility, structure, or a piece of equipment can reach beyond 30 years. This involves managing and documenting maintenance over a long history of repairs. Proper documentation and recording can help teams avoid mistakes and save companies money in the long run. Technicians also save time by relying on past records to solve problems.

#### AUDIT AND CERTIFICATION

When it comes to audits, government regulations and inspections, you'll sleep better knowing that every task and maintenance request is recorded and stored safely in the cloud. This makes for ease of application for certification and the prevention of

unwarranted legal action. By using an automated, safe and secure maintenance management system, you are in control of the smooth and safe operation of your business.

#### INDUSTRIES WHO BENEFIT FROM MAINTENANCE PRO?

All industries need some kind of maintenance. Some rely heavily on maintenance to perform services, while others have very little equipment they need to monitor.

Maintenance Pro helps industries like production companies, facility and building investors, fleet and vehicle companies, and organizations that manage roadways and public structures:

- **PRODUCTION:** machines, assembly lines, forklifts and heavy equipment
- **WAREHOUSES AND BUILDINGS:** apartments, government facilities, leased buildings and warehouses
- **FLEET VEHICLES:** transportation vehicles, delivery vehicles, service vehicles, ships and long haul trucks
- **LINEAR ASSETS:** roads, rails, pipelines, and electricity transmission lines
